

TransportDCAT-AP: A common metadata model

Federated SPARQL queries over Public Transport domain

Civic Lab - 18/07/2017

David Chaves

dchaves@fi.upm.es

- Introduction
- The importance of metadata in open data (portals)
- EU regulation on the provision of EU-wide multimodal travel information services
- TransportDCAT-AP: Metadata profile for public transport domain
- PhD thesis: Federated queries over heterogeneous resources

Who am I?

PhD Student at Ontology Engineering Group

PhD Student and researcher at OEG

- PhD thesis - Early stage (1/4 years)

“Federated query processing over heterogeneous native and virtual RDF datasets”

- EU Projects focused on **Semantic Interoperability in Public Transport**

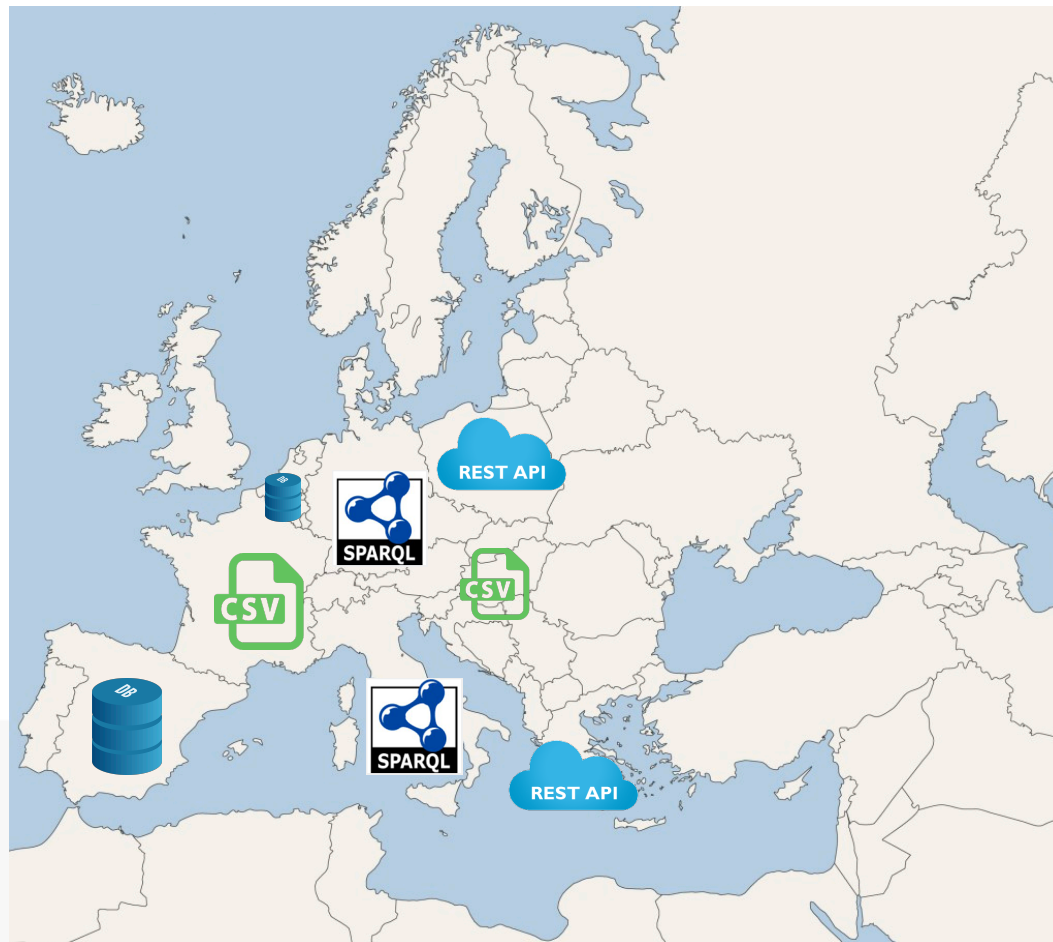

The importance of metadata in Open Data

- There is a clear lack of metadata in most of the open data portals
- Open data is considered a key asset for the development of many types of open applications
- Availability of such metadata will make it possible for agents to discover Open Data throughout Europe
- Metadata provides an easy way to get relevant information from datasets

EU regulation on the provision of EU-wide multimodal travel information services

*“In order to facilitate the **easy exchange and re-use of these data** for the provision of comprehensive travel information services, corresponding metadata and information on the quality of the data will be accessible to users through **a national or common access point.**”*

TransportDCAT-AP

Metadata profile for public transport domain

- OASIS: Open Applications for Semantically Interoperability Services
- Partners: UPM, CRTM, OKF Belgium, Stad Gent, iMinds and VICTOR
 - Toolkit for non-experts focused on Public Transport/Services
- Development of new metadata profile: TransportDCAT-AP
 - Based on EU metadata standard (DCAT-AP)
 - Included controller vocabularies
 - CRTM metadata is following TransportDCAT-AP
 - 10 organizations were involved in its validation
 - Undergrad student will develop a WebApp

- The properties **dct:spatial** and **dcat:keywords** from dcat:Catalog and dcat:Dataset changes from **Optional** to **Mandatory**.
- The property dcat:keywords modify its range following:
 - dcat:keyword A, where A is the type of transport (Tram, Metro, Rail, Bus, Ferry, Cable car, Suspended cable car, Funicular or Other)
 - dcat:keyword B, where B is the type of dataset (Calendar, Fare, Frequencies, Routes, Shapes, Stops, Transfers, Trips or Other)
 - dcat:keyword C, where C is an INSPIRE feature for address (AdminUnitLevel3 (Province): Madrid)

```
dcat:Dataset dcat:keyword "Bus";  
dcat:Dataset dcat:keyword "Stops";  
dcat:Dataset dcat:keyword "AdminUnitLevel3 (Province): Madrid, Spain";
```

Federated query processing over heterogeneous native and virtual RDF datasets

“Federated query processing over heterogeneous native and virtual RDF datasets”

- Two different types:

A

```
select * where {  
  gp  
}
```

B

```
select * where {  
  service <s1> {t}  
  service <s2> {t}  
  service <s3> {t}  
}
```

- Disadvantages of A:
 - Closed world
 - Focused on the source selection problem
 - Without real application
 - Doesn't deal with the problem of availability

- Metadata profile for federated queries over heterogeneous resources
- Extend a federated benchmarking adding SERVICE and GRAPH
- Optimizations of the queries (Future Work)
- Real world environment for evaluation

THANK YOU!
